

Code in Devanagari.

A real bytecode-VM language, in pure Rust. Runs in your browser.

विधि वर्ग(न):

फल न * न

बताओ मानचित्र([1,2,3,4], वर्ग)

```
// input → output  
[1, 4, 9, 16]
```

- › Bytecode VM + WebAssembly
- › Classes, closures, generators, pattern matching
- › C FFI — call any native library
- › HTTPS, JSON, SQL, regex, threads
- › Units, linear algebra, Kalman control
- › Arbitrary-precision integers
